Start TYPO3 Responsive!

Start TYPO3 Responsive! (start) extends TYPO3 with the responsive framework Foundation (Zurb), a dozen responsive Backend Layouts and some responsive Grid Elements.
It enables editors, to create responsive nested layouts within a few minutes.
It extends some backend forms for controlling the display of content elements depending on devices like smartphones, tablets and desktops.
It extends TYPO3 content elements and menus with some helpful responsive Foundation features.
A template for a responsive newsletter is included.

Version: 2.4.0, 2016-01-04

Extension Key: start

Language: en

Keywords: framework, responsive, foundation, backend, layouts, zurb, grid

Some Grid Layouts. See more at "Grid Layout" on page 14 below.

Introduction

What does it do?

- Start TYPO3 Responsive! (start) extends TYPO3 with the responsive framework Foundation (Zurb)[1], a dozen responsive Backend Layouts and some responsive Grid Elements.

- It enables editors, to create responsive nested layouts within a few minutes.

- It extends some backend forms for controlling the display and hide of content elements depending on devices like smartphones, tablets and desktops.[2]

- It extends TYPO3 content elements and menus with some helpful responsive Foundation features like

  - Breadcrumbs

  - Clearing Lightbox

  - Flexible Video

  - Icon Bar

  - Side Nav

  - Top Bar

- You can customise a lot of CSS properties – especially colours – by an user interface.

- It provides a template for an extensive responsive newsletter.

- You should need no longer than 15 minutes for a ready-for-use responsive TYPO3.

What do you need?

- A TYPO3-Installation.

- If you want to use the ready-for-use Grid Layouts, an empty table for Grid-Layouts.

Audience

- TYPO3 agencies

- TYPO3 integrators

- TYPO3 developers

---

1   http://foundation.zurb.com/. start is using the extension "Foundation Framework" (cb_foundation)
2   dito.

Installation

Install and enable

- Foundation Framework (cb_foundation)
- Grid Elements (gridelements)
- Start TYPO3 Responsive! (start)[1]

---

1   If you need a developer version, please refer to https://forge.typo3.org/projects/extension-start/wiki

Configuration

Foundation Framework (cb_foundation)

- Nothing to do.

Start TYPO3 Responsive! (start)

New Website

- Add a TypoScript template to your root page.

Existing Website

- Disable / hide the TypoScript template of your root page.

Both – existing and New Website

Take your TypoScript root template:

- Options
    - Clear: [X] Constants, [X] Setup
    - Rootlevel: [X]
- Include the static templates
    - CSS Styled Content (css_styled_content)
    - Gridelements (gridelements)
    - Foundation framework (cb_foundation)
    - Foundation framework (default CSS) (cb_foundation)[1]
    - Start [1] (start)
    - Start [1] +Gridelements (start)
    - Start [2] Foundation (start)
    - Start [2] +Foundation Icons 3 (start)
    - Start Customer (startcustomer)[2]
- Configure some base properties like the base URL and language properties with the Constant Editor.
  See: category [START - CONFIG]
- Configure the pid of your root page with the Constant Editor.
  See: category [START - PAGES] > field: Root page: *Your root page id*

---

1 Not needed, if you are using a Start Customer template. See "Start Customer" below.
2 Only in case of a customer extension for Start.

Grid Elements

- Add a folder for grid layouts. For example
  - Grid Layouts[1]
- Create backend layouts (**<u>use it only, if your table tx_gridelements_backend_layout is empty!</u>**)
  - edit typo3conf/ext/start/ext_tables_static+adt.sql
  - replace 'xyz' with the page id of your folder "backend layouts" from above
  - Copy the SQL statements from the file and paste it into PhpMyAdmin
  - Send the SQL statements
- Create backend layouts icons
  - Copy the icons to the tx_gridelements folder in uploads:

```
cp -aR typo3conf/ext/start/Resources/Public/uploads/tx_gridelements/* uploads/tx_gridelements/
```

- Check the content of your folder "backend layouts". It should contain 8 backend layouts.

---

1   On the top level.

First Steps

Pages

Existing Website

Nothing to do but adding a page called page 2 for playing with samples.

New Website

Add some pages like

- page 1
- page 2
    - page 2.1
    - page 2.2
- page 3

Backend Layout

- Select your root page.
- Select a layout[1] for the current page and the subpages too.
  Here: [Start Bronze 1: | MAIN |]

20: Bronze: MAIN

Next Steps

Please cross "Features and Samples" on page 11 below for the next steps.

---

1   See page properties > Appearance

Features and Samples

Backend Layouts

21: Default

22: Simple: MAIN   23: Simple: Left | MAIN   24: Simple: MAIN | Right   25: Left | MAIN | Right

26: Bronze: MAIN   27: Bronze: Left | MAIN   28: Bronze: MAIN | Right   29: Left | MAIN | Right
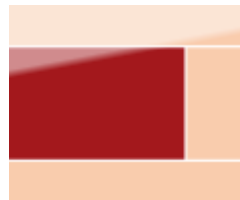

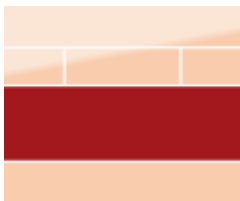

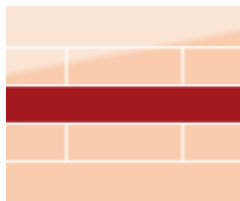

30: Silver: Top | MAIN   31: Top | MAIN | Bottom   32: MAIN | Bottom
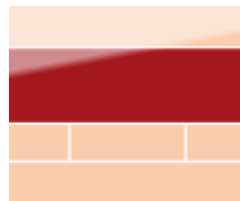

33: Newsletter

You are selecting a Backend Layout

- page properties
- tab [Appearance]
- Page Layout

Navigation

Illustration 34: Top-Bar

Top Bar

Add a menu. Here the foundation top bar.

- Select your root page.

- Add to the header area

  - a special element. Here: a special menu

  - Select [Start: Foundation Top Bar]

- Configure the top bar with the Constant Editor.
  See: category [START - FOUNDATION - TOPBAR]

Illustration 35: Breadcrumbs

Breadcrumbs

Add a menu. Here the foundation breadcrumbs.

- Select your root page.

- Add to the header area below of the top bar

  - a special element. Here: a special menu

  - Select [Start: Foundation Breadcrumbs]

- Configure the breadcrumbs with the Constant Editor.
  See: category [START - FOUNDATION – BREADCRUMBS]

Side Nav

Add a menu. Here the foundation side nav.

- Select your root page.

- Add to the footer area

  - a special element. Here: a special menu

  - Select Menu Type: [Start: Foundation Side Nav from directories]

  - Select page: Page 2
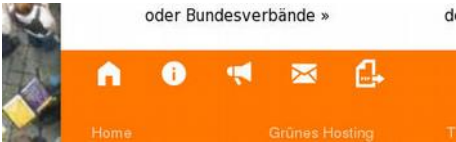

Illustration 36: Icon-Bar

Icon Bar

Add a menu. Here the foundation icon bar.

- Select your root page.

- Add to the footer area below of your side nav
    - a special element. Here: a special menu
    - Select Menu Type: [Start: Foundation Icon bar Start]

- Configure the Icon bar Start with the Constant Editor.
    - Category [START - FOUNDATION – ICONBAR START]
    - Class: icon-bar five-up
    - 10 pid: page id of your root page (here:8773)
    - 10 modal: false

How to use a modal is explained in the section "Modal" on page 16 below.

Grid Layout

37: 1 column

38: 2 columns

39: 3 columns
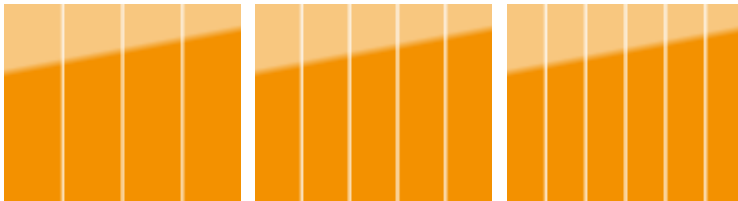

40: 4 columns

41: 5 columns

42: 6 columns

Two Columns

Add a two columns grid layout.

- Select your page 2.
- Add to the content area a Grid Element
    - Header: "Grid Layout with two columns"
    - Grid Layout: [Columns 2]
    - Save the form
    - Large columns arrangement: [6 | 6]
    - Medium columns arrangement: [6 | 6]
    - Small columns arrangement: [12 | 12]
- Add to the column 2 of your grid layout a content element TEXT
    - Header: Column 2
    - Text: My second text in the second column of my first grid layout.

Nested Grid Layout

Add a two columns grid layout to the second columns of your first grid layout (see above)

- Add above the TEXT element "Column 2" a Grid Element
    - Header: "Grid Layout with three columns"
    - Grid Layout: [Columns 3]
    - Save the form
    - Large columns arrangement: [4 | 4 | 4]
    - Medium columns arrangement: [12 | 12 | 12]
    - Small columns arrangement: [12 | 12 | 12]
- Add to the column 1 of your second grid layout a content element TEXT
    - Header: Col 2.1
    - Text: My first text in the first column of my second grid layout.
- Repeat the last step for the second and the third column.
    - Adapt the header and the text.

Illustration 43: Without any frame

Illustration 44: Panel

Illustration 45: Callout

Panel

Move the second grid layout to a panel.

- Edit the second Grid Element "Grid Layout with three columns"
  - Grid Layout: [Columns 3]
  - Set [Appearance] > Indentation and Frames to [Panel]

Callout

Repeat the step from above, but set Indentation and Frames to [Callout]

Illustration 46: A modal

Modal

Content Element

Add to your root page a page "Modals".

- Set both Backend Layouts – this page and subpages – to [Start Simple 1: | Main |]
- Move the page type from [Default] to [Folder].

Add to the folder "Modals" the folder "Contact" (in my sample the folder got the page id 8780).

Add to the content area of the folder "Contact" a content element:

- General
    - Type: [Text & Images]
    - Header: Contact
    - Text: Your name, phone number and e-mail-address.
- Images
    - Upload a portrait of you.
- Appearance
    - Image Adjustments: Width: 100
    - Image Alignment: [Beside Text, Left]
    - Number of columns: [1]

Link with the Icon Bar

Link the content with an icon of the Icon Bar Start (see section "Icon Bar" on page 13 above).

- Configure the Icon Bar Start with the Constant Editor.
    - Category [START - FOUNDATION – ICONBAR START]
    - 20 pid: page id of the modal folder contact (here: 8780)
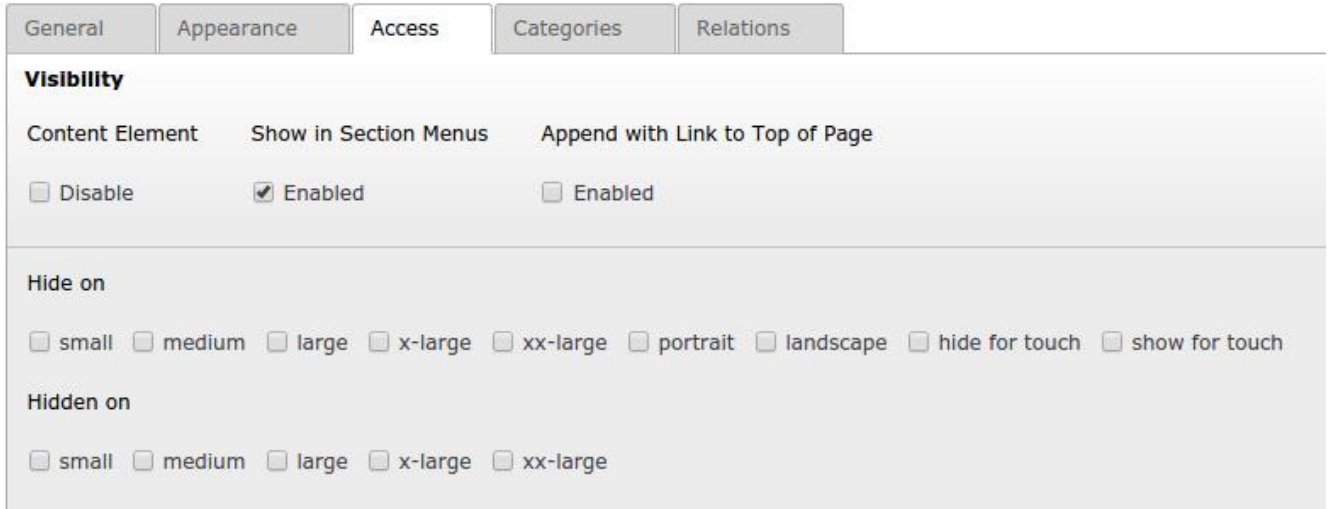

RTE-Editor

cb_foundation provides some custom configurations for the RTE.

See details at

- https://docs.typo3.org/typo3cms/extensions/cb_foundation/UserManual.html#rte

Visibility classes

Illustration 47: Visibility classes

See details at

- https://docs.typo3.org/typo3cms/extensions/cb_foundation/UserManual.html#visibility

Flexible Video

48: Desktop   49: Smartphone   Illustration 50: Flexible Video in the Backend

See:

- Details at: https://docs.typo3.org/typo3cms/extensions/cb_foundation/UserManual.html#flexible-video
- Live sample at: http://neukoellner-talente.de/videos/

Responsive Newsletter

Requirements

You are using Direct Mail[1].

You have configured Direct Mail.

You have added a Direct Mail folder to the page tree.

TypoScript

Select the Direct Mail folder.

Disable all TypoScript templates.

Add the TypoScript template:

- page_*page-name_id*[2]

Configure the template like in the sample below.

[General]

- Constants[3]

```
// plugin.tx_directmail_pi1
// start.config
// styles.content

plugin.tx_directmail_pi1 {
  siteUrl = http://your-domain.com/
}

start {
  config {
    absRefPrefix     = http://your-domain.com/
    htmlTag_langKey  = de
    language         = de
    locale_all       = de_DE.UTF-8
    tx_realurl_enable = 1
  }
}

styles {
  content {
    imgtext {
      maxWInText  = 260
      maxW        = 580
    }
  }
}
```

[Options]

- Clear
    - [X] Constants
    - [X] Setup
- Rootlevel
    - [X]

Illustration 51: Responsive Newsletter

---

1 Direct Mail isn't obligated, but this tutorial refer to Direct Mail only.
2 Recommended only: *page-name* is the name or short name of the fiolder. The *id* is the id of your TypoScript template.
3 All properties are editable by the Constant Editor

[Includes]

- Include static (from extensions)
    - CSS Styled Content (css_styled_content)
    - Direct Mail Content Boundaries (direct_mail)
    - Direct Mail Plain text (direct_mail)
    - Start [1] (start)
    - Start [8] +e-mail (start)
    - Start *Customer* [8] E-Mail (start*customer*)[1]

Backend Layout

52: Newsletter

Select the newsletter backend layout:

- [General]
    - Move the page type from [folder] to [default]
- [Appearance]
    - Backend Layout (this page only): [Start Newsletter Basic: | MAIN |]
    - Backend Layout (subpages of this page): [Start Newsletter Basic: | MAIN |]
- [General]
    - Move the page type from [default] to [folder]

Header and Footer

Your Direct Mail folder has now a header section and a footer section.

Add to the header section your header.

Add to your footer section your footer.

Header and footer will handed down the every subpage, which doesn't have any own heder and footer.

Content

Add to your Direct Mail folder a page.

Add to the content section of this page the content of your newsletter.

---

1   Optional: An additional static template of a Start *customer* extension

User Interface: Constant Editor

START - COMPRESS CSS AND JSS

Prefix: start.compress

Property:	Data type:	Description:	Default
css	boolean	CSS: If set, CSS files will compressed and concatenated. These properties will enabled: config.compressCss, config.concatenateCss.	TRUE
jss	boolean	JSS: If set, JSS files will compressed. These properties will enabled: config.compressJs, config.concatenateJs.	TRUE

START – CONFIG*

Prefix: start.config

Property:	Data type:	Description:	Default
absRefPrefix	boolean	absRefPrefix: If this value is set, then all relative links in TypoScript are prepended with this string. Prefixing all links with a "/" results in absolute link paths: /. Prefixing all links with the path to a subdirectory: /some-subsite/. Prefixing all links with a URI scheme: http://example.com/.	
admPanel	boolean	Admin Panel: Display the admin panel in the frontend for a logged in backend user	TRUE
baseURL	string	Base URL*: *Obligate! Your base URL with ending slash. Example: http://die-netzmacher.de/	
doctype	string	Document type: • html5 for the HTML5 doctype. • none for no doctype at all. • xhtml_11 for the XHTML 1.1 doctype. • xhtml_basic for the XHTML basic doctype. • xhtml_frames for the XHTML 1.0 Frameset doctype. • xhtml_strict for the XHTML 1.0 Strict doctype. • xhtml+rdfa_10 for the XHTML+RDFa 1.0 doctype. • xhtml_trans for the XHTML 1.0 Transitional doctype.	html5
clearAtMidnight	boolean	Clear cache at midnight: Obligated, if your are using calender items.	FALSE
headerComment	string	Header comment: The content is added before the "TYPO3 Content Management Framework" comment in the <head> section of the page. Use this to insert a note like that "Programmed by My-Agency". Default: Development by http://die-netzmacher.de: responsive TYPO3.	See description
pageTitleFirst	boolean	Pagetitle first: TYPO3 by default prints a HTML title tag in the format "website: page title". If pageTitleFirst is set (and if the page title is printed), then the page title will be printed IN FRONT OF the template title. So it will look like "page title: website".	FALSE
language	string	Language: Example for German: de	en
htmlTag_langKey	string	Language HTML: HTML tag langauge keyExample for German: de	en
locale_all	string	Language local all: Example for German: de_DE.UTF-8	en_GB.UTF-8
tx_realurl_enable	boolean	Real URL	FALSE
typolinkEnableLinksAcrossDomains	boolean	Enable links across domains: This option enables to create links across domains using current domain's linking scheme. This option implies "config.typolinkCheckRootline=1", which will be activated automatically. Setting value of "config. typolinkCheckRootline" inside TS template will have no effect.	FALSE
prefixLocalAnchors	boolean	Prefix local anchors: Recommended: all. If set to one of the keywords, the content will have all local anchors in links prefixed with the path of the script. Basically this means that <a href="#"> will be transformed to <a href="path/path/script?params#">. This procedure is necessary if the <base> tag is set (e.g. if the "realurl" extension is used to produce speaking URLs). See property "config.baseURL". all: The content is always processed before it is possibly stored in cache (or not stored in cache). cached: The content is only processed, if the page will be put into the cache. output: The content is processed just before it is echoed out.	all

Property:	Data type:	Description:	Default
disablePrefixComment	boolean	Disable prefix comment: If set, the stdWrap property "prefixComment" will be disabled, thus preventing any revealing and space-consuming comments in the HTML source code.	TRUE
removeDefaultJS	string	Remove default JS: If set, the default JavaScript in the header will be removed. The default JavaScript is the blurLink function and browser detection variables. Special case: If the value is "external", then the default JavaScript is written to a temporary file and included from that file. See "inlineStyle2TempFile" below.	external
inlineStyle2TempFile	boolean	inlineStyle2TempFile: If set, the inline styles TYPO3 controls in the core are written to a file, typo3temp/stylesheet_[hashstring].css, and the header will only contain the link to the stylesheet. The file hash is based solely on the content of the styles.	TRUE
spamProtectEmailAddresses	integer	Protect e-mail: If set, then all email addresses in typolinks will be encrypted so spam bots cannot detect them. Range from -10 to 10.	-3
spamProtectEmailAddresses_atSubst	string	Substitute @:Substitute label for the at-sign (@). Default: @remove-this.	See description

START – FAVICON

Prefix: start

Property:	Data type:	Description:	Default
favicon	string	Path: Path to the favicon Default: typo3conf/ext/start/Resources/Public/Images/favicon.ico	See description

START - FOUNDATION – BREADCRUMBS

Prefix: start.foundation.breadcrumbs

Property:	Data type:	Description:	Default
includeNotInMenu	integer	includeNotInMenu: Display a page title even it isn't visible in the menu	FALSE

START - FOUNDATION – GMENU

Prefix: start.foundation.gmenu

Property:	Data type:	Description:	Default
no.listNum	integer	listNum NO: position of the image in the list of images for the menu in the NO (normal) state	0
ro.listNum	integer	listNum RO:position of the image in the list of images for the menu in the RO (rollover) state	1

START - FOUNDATION – ICONBAR

Prefix: start.foundation.**iconbar**

Property:	Data type:	Description:	Default
class	string	Class: HTML class of the icon-bar Default: icon-bar vertical five-up	See description
no.listNum	integer	listNum NO: position of the image in the list of images for the menu in the NO (normal) state	0
ro.listNum	integer	listNum RO:position of the image in the list of images for the menu in the RO (rollover) state	1
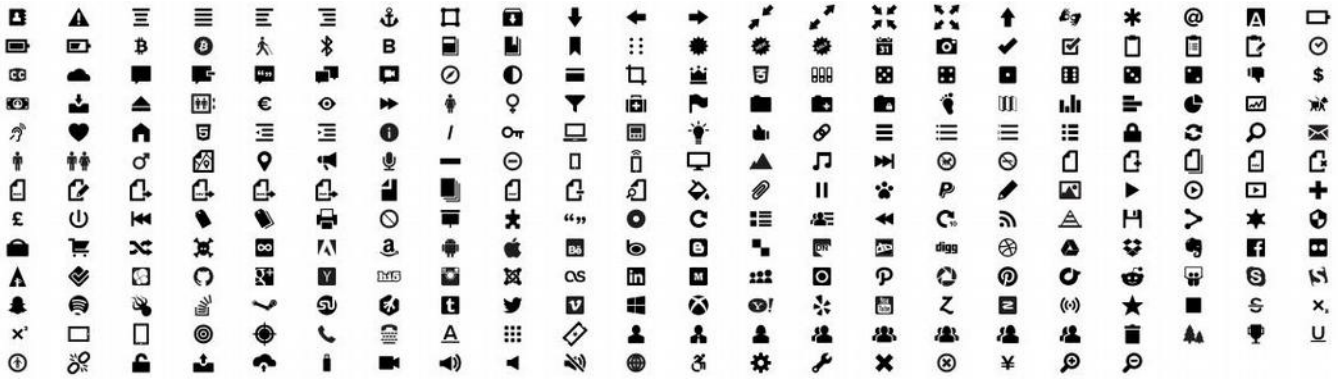

Illustration 53: Foundation Icons

Start [9] Debug

Adapt Start to your needs

CSS

Recommended: EXT:startcustomer

Controll a lot of CSS properties by the extension Start TYPO3 Responsive Customer (startcustomer):

- Install and enable Start TYPO3 Responsive Customer (startcustomer)
- Include the static template Start Customer [1]

See details at

- TYPO3 repository: http://typo3.org/extensions/repository/view/startcustomer/
- the PDF manual: http://start-typo3-responsive.de/typo3conf/ext/startcustomer/doc/manual.pdf

Own CSS file

Include your CSS file like in the snippet below.

```
page.includeCSS {
  myOwnCSS = fileadmin/myown.css
}
```

HTML

Backend Layouts and Grid Layouts

Mix Backend Layouts and Grid Layouts like you need it.

Fluid Templates

Use your own fluid templates. See Constant Editor > START – TEMPLATES* on page 23 above.

Helpful suggestions and benefits

Forum

If you have helpful suggestions, feel free to publish any question, bug or code snippet on

- Start TYPO3 Responsive! forum at

Posts are welcome in English and German.

Packages for Sponsors

Your donation and sponsoring is welcome.

Please order a package for sponsors at

- http://start-typo3-responsive.de/sponsoring/

Fun – 50 EUR

You like to treat the Start TYPO3 Responsive! project.

You don't expect any equivalent. No logo. No service.

Throw 50 EUR or any other old sum into the cash box.

You will get a receive. You can set the amount off against tax liability.

Logo – 150 EUR

You are treating the Start TYPO3 Responsive! project and you like to be a guide for others.

Your logo will appear in the manual, at the website and in the extension manager of Start TYPO3 Responsive!

The period of validity is limited to one year.

You will get a receive. You can set the amount off against tax liability.

You can pay more than 150 EUR.

Patron – 500 EUR

You are the patron. You are treating Start TYPO3 Responsive! project and you like to pay the developer more than best for two hours service.

Your logo will appear in the manual, at the website and in the extension manager of Start TYPO3 Responsive!

You can book the developer of the Organiser for two hours.

The period of validity for both – the logo and the two hours – is limited to one year. If you don't use the two hours in this period, you will lost it.

You will get a receive. You can set the amount off against tax liability.

You can pay more than 500 EUR.

Other extensions published by Die Netzmacher

- +AOE Linkhandler Configurator: Configure the AOE linkhandler supported by userinterfaces. Out-of-the-box templates for cal, org, tt_news and tt_products. Don't edit page TSconfig any longer. http://typo3.org/extensions/repository/view/linkhandlerconf/

- autositemap: A smart site-map optimised for the footer. It groups menus in columns. Great menus will get two columns. Configuration is based on TypoScript HMENU. http://typo3.org/extensions/repository/view/autositemap/

- Browser – TYPO3 without PHP. Develop your TYPO3 extension 8 times faster! You need one line TypoScript for a result list with a search form, a record browser and an index browser. Images are wrapped self-acting. SEO, Search Engine Optimization, is integrated. http://typo3-browser.de/

- Caddy – the TYPO3 shopping cart. You can use it for your own needs. You need a database with products or any other items only. You can install Caddy out of the box with one mouse click – see Quick Shop below. http://typo3-caddy.de/

- Deal! – TYPO3 Quick Shop interface for the marketplace ebay. Manage all items with TYPO3 and publish it on ebay. Amazon is under construction. http://typo3-deal.de/

- Duty – collection of helpful scheduler tasks. Here: remove deprecated files from directories. http://typo3.org/extensions/repository/view/duty/

- Flip it! offers lovely and smooth page flip transitions. It enables you to run over pages in PDF documents like in a real magazine. It is based on flash. Flipt it! can convert PDF documents to swf files automatically. http://typo3.org/extensions/repository/view/flipit/

- Jobmarket is a catalogue with job offers. Views, the a-z-browser, the page-browser, the search, social bookmarks and a lot of other stuff can configured by the Browser plugin with the mouse. http://typo3-job-market.de/

- Organiser – TYPO3 for the lobby and the organisers. Handle news, events, staff, headquarters, locations, workshops and a calendar with one extension. Sell online tickets! Install the Organiser with one mouse click! http://typo3-organiser.de/

- Quick Shop – the fastest shop in the history of TYPO3. Install it with one mouse click! Quick Shop is based on the browser (see above) and powermail. http://typo3-quick-shop.de/

- PDF Controller: Offer a TYPO3 page for PDF download. Individual layout with background PDF file. TYPO3 sessions are supported. Handling of responsive backend layouts and grid elements possible. PDF engine is TCPDF. http://typo3-pdfcontroller.de/

- Radial Search (Umkreissuche) – Enable the browsing through your data by geo location. 'Your data must have a latitude and a longitude. Address data can geocoded automatically by the Browser - TYPO3 without PHP. http://typo3.org/extensions/repository/view/radialsearch/

- Route – Publish your routes with GoogleMaps or OpenStreetMap. Routes have points of interest (POI). You can categorise and filter both: routes and POI. Address data can geocoded automatically. http://typo3-route.de/

- seo_dynamic_tag: Search Engine Optimization for the title tag, the canonical tag and the meta tags author, description and keywords. Configuration by a user interface. http://typo3.org/extensions/repository/view/seo_dynamic_tag/

- Slick - jQuery Carousel: Fully responsive. Scales with its container. Separate settings per breakpoint. Uses CSS3 when available. Swipe enabled. Desktop mouse dragging. Infinite looping. Fully accessible. http://typo3-slick.de/

- Start extends TYPO3 with the responsive framework Foundation (Zurb). Provides a dozen ready-to-use backend layouts and some grid-layouts. Template is included for a responsive newsletter. Based on the responsive framework Foundation (Zurb). http://start-typo3-responsive.de/

- TSconfig Pages and Users by extManager (extkey: tsconf): Configure the the eight most commonly used TSconfig porperties with the mouse - like page tree uids, activated extended view, activated clipboard, ... http://typo3.org/extensions/repository/view/tsconf/
